

To whom it may concern,

As a recent subscriber to XM Satellite Radio, I have been very pleased with the service, and there is no doubt in my mind that it is a medium capable of providing superior content and organization in comparison to land broadcast radio in it's current form. The mere fact that a superior broadcast mechanism has been designed and put into operation should not make satellite radio subject to undue political scrutiny. There is no harm in localized services over satellite. Please reject NAB petition 04-160 and allow satellite radio to grow unhindered into the product we know and love.
